N+1 Usages, N+1 Fun

Master Kit is short for tool kit. It's consisted of holder (picture 1), powerful sucker (picture 2), hand wring mount (picture 3), king-size lever/spike (picture 4), mobile holder (picture 5), rotary mount (picture 6) and FPH-41H (picture 7). It can be used dividually and combined. There is a screw shaft in the holder, allowing you to operate it in any circumstance. For example, fix it to smooth object (glass, interlayer) and dendroid object. Just rotate the screw shaft then the holder is fixed. It's good for creating and recording your home life and outdoor activities (yacht, bike, finishing and play basketball)
